
Flywheel Questions! (Got it done but have a prblm)

Posted by Dyechild - 2008/04/17 13:50

Hey all I just got a lightweight flywheel from Fidanza, and a stage 1 clutch from Spec, well when I shift in 1st and 2nd gear I get this weird rattle/chatter/ sounds like my engine is trying to destroy itself, its really weird and hard to explain. Am I stuck with this jerkyness coming from the engine or do the parts have to wear in? Oh yea I have the Stratus R/T, so I have the 3.0L But one of my friends says he "thinks" its normal, but I dont trust him with engines... so please if anyone can help me out that would be super.

Thanks,
Jr

You think it might be your motor mounts?
