
Tearstone V6 Turbo Kit Emanage Map

Posted by jdmsupra - 2007/10/10 18:47

Hello,

I have Ryu's old kit. The emanage I got is pooched but I already had one NA. I was wondering if I can get the base map that came with this turbo kit originally so that I have a starting point. I have ditched the 520 cc injectors I got with this kit and have now put 440cc injectors in. I also have the upgraded turbo. Please help ASAP.

Juan

Russ, you there? I emailed you and posted on here and have a lengthy thread in club3g.com on what's going on. Can you help me?

Sorry, we don't have the base maps for the turbo kits available. But anyone skilled with an e-manage should have no problems tuning it within about 2 hours of dyno time.

To make your car drivable now, simply just set the injector correction and tweak the low throttle RPMs to optimize your idle on the A/F map. DO NOT use the A/F map to make upper RPM or boost condition corrections such as adding fuel. You will want to use the injector map (if you are using the injector harness) to add fuel.
